

PP PEELABLE FILMS

for Microwave Products

PERFECTLY COOKED IN THE PACKAGE

The Wipak Group helps you to develop economical and ecologically sustainable packages – and to successfully bring them on the market. Numerous innovations are the result of a close and trustful cooperation with our customers and industrial partners.

Ideal:

Pre-cooked products

- ▶ Baked potatoes
- ▶ Hamburgers
- ▶ Knuckles and steaks
- ▶ Fried sausage
- ▶ Soups and vegetables
- ▶ Pasta

Benefits

- ▶ Suitable for microwaves
- ▶ High transparency
- ▶ Peelable film for easy opening
- ▶ Good hot tack
- ▶ Reduced amount of packaging material
- ▶ No sealing of surfaces at increased production temperatures

PP PEELABLE FILMS

Increased convenience for ready meals and meal components

Wipak offers sterilizable top and bottom films for challenging cooking applications and ready meals. Made of polypropylene, these composite films offer special peeling functions which make it easier for the consumers to prepare ready meals directly in the package.

Thanks to the peelable film, the pressure which builds up during heating is allowed to evaporate from the closed package so that the food product does not dry out – steaks e.g. thus remain tender and juicy. The package opens exactly at the moment when the hamburger or the individually packed baked potato has reached the ideal eating temperature.

The defined opening force and the film sealing, ideally adapted to the cooking time, are advantageous for the processor, too, since they do not require any additional applications, complex valve solutions or perforations using laser engraving.

Features:

- ▶ Sterilizable up to 121 °C
- ▶ Sealing from 150 °C
- ▶ Supports thermoforming
- ▶ Supports coloring
- ▶ Peelable tray film
- ▶ Top web for permanent sealing

Suitable for:

- ▶ Gassed packaging
- ▶ Vacuum packaging
- ▶ Deep-freeze packaging
